

Did you know...

The Affiliate System Trend Report now supports Lineup Versioning as of v10.3 software.

If the user has two or more versions of the same lineup, with each version representing the state of that lineup at different points in time, then the Trend report can use the most appropriate lineup version for each requested survey.

To use this feature, check the “Use lineup versioning” checkbox in the Lineups tab, and click either a plus symbol or minus symbol (the plus symbol is shown if the associated lineup already has lineup versioning information defined).

This opens the lineup versioning dialog. Enter each version of the lineup into the row pertaining to when that version of the lineup first went into effect. Either type into the yellow editable area or click the drop-down button.

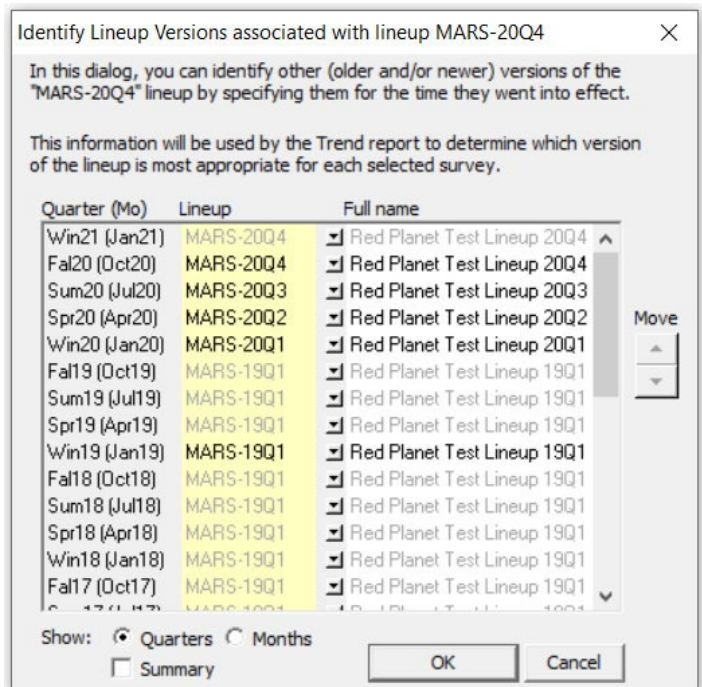

In this example, there is one MARS lineup in 2019 and four quarterly versions of the MARS lineup in 2020.

Note that lineups automatically propagate forward (shown in gray), until the next version goes into effect.

If you need finer granularity, you can check the **Months** option, which will show a line for each month.

Checking the **Summary** box will show only the rows where you have entered a lineup code (not the grayed rows).

When a selected row as a lineup code entered, you can use the down or up **Move** arrows to easily move that lineup down (to an earlier survey) or up (to a later survey).

When lineup versioning is in effect, the Trend report cover page discloses which versions of the lineups were actually used for each survey (or range of surveys).

Lineup versioning in effect for each survey				
Code	Survey(s)	Version Used	Full Name	Date
MARS-20Q4	* Win19 - Fal19	MARS-19Q1	Red Planet Test Lineup 19Q1	01/03/19
	* Win20	MARS-20Q1	Red Planet Test Lineup 20Q1	01/04/20
	* Spr20	MARS-20Q2	Red Planet Test Lineup 20Q2	04/01/20
	* Sum20	MARS-20Q3	Red Planet Test Lineup 20Q3	07/01/20
	Fal20	MARS-20Q4	Red Planet Test Lineup 20Q4	10/01/20

* Identifies when a different version of the selected lineup is used. (Only lineups affected by versioning are shown)
