

Did you know...

ACT 1 released software version **10.8** on **September 8, 2023**. For details of all enhancements, see *“What’s New in Version 10.8?”* in the ACT 1 Software Guide or at this link: www.act1systems.com/wnvercurandhist

LINEUP MANAGER

- The Composite List Report has a new sort option to display out-of-date composites at the top of the report, making it very easy to identify all of the out-of-date cases.
- The Composite List Report has a new option for a quicker report. In cases where the user does not want a report on all existing composites, the report now begins by asking if you want to see “All” or “Selected” composites.
- Composites will now be properly flagged as out-of-date if the filter lineup is being used and has been updated, even if there are no other updates to the composite or any of its member lineups.
- There is a new Composite Comparison feature, allowing users to quickly see if the “build instructions” for one composite differ from the build instructions for other composites (including same vs. different member lineups, repetitions for member lineups, and assigned daypart and spot values).

SITE MANAGER

- Has a new feature supporting more reliable downloads. ACT 1 now maintains servers at two separate sites with mirrored content. If the primary server happens to be unavailable, Site Manager will seamlessly and transparently switch to downloading from the secondary server. From the user’s perspective, nothing will be different except the window title referring to server-2 instead of server-1.

PLANNER

- Planner now offers a quick way to merge multiple proposals into a single proposal, such as merging four separate quarterly proposals from one network into a single 52-week proposal.
- Planner can combine duplicate daypart lines, such as combining identical rows (same vehicle, daypart, spot length, rate, lineup info & AQH) that may have different spots for different weeks.
- CSV proposals now support AQH Ratings and daypart name descriptions, just like XML proposals do.
- For more details, see the online guide or recent updates at <http://www.act1systems.com/planner>.

GENERAL

- The “Help” menu in all applications now has a new item that will display the user documentation. For Affiliate System, Lineup Manager, and Research, it displays the ACT 1 Software Guide PDF. For Planner, it displays the Planner User’s Guide PDF (either the installed version or the online version).
