

## Did you know...

There is a new Composite Comparison feature, allowing users to quickly see if the “build instructions” for one composite differ from the build instructions for other composites. This will display a report showing whether or not the composites have the same member lineups, the same number of repetitions for member lineups, the same assigned daypart and spot values, and the same other build settings (such as including schedules and/or filter lineup).

To use this feature, go to Lineup Manager’s Management menu, choose Composite Management and click a “primary” composite. Then click the new “Compare with” button and select one or more “secondary” composite lineups you want to compare against the primary composite, and click OK. A report will be displayed showing the composite comparison results. Below is an example, where in this case, the user can see both GREEN and RALPH composites include schedules and contain the FLIP member lineup, but that there are several other differences in the build instructions.
